Li lab, http://web.stanford.edu/~yangili/ and Basu Lab, https://wordpress.uchospitals.edu/basu-lab/ at the University of Chicago are looking for a highly-motivated joint postdoc to work on computational single-cell genomics. We are a pair of dynamic labs in Genetic Medicine that use high-throughput single-cell and single nuclei sequencing techniques to answer important questions in immunology, disease, and gene regulation with strong relevance in medicine.

The ideal candidate will have a strong background in computational biology, and/or statistics and will also be passionate about molecular and cellular biology. They will have the unique opportunity to design their own study and collect large-scale single-cell -omics data for analysis.

If you are interested, please contact us at onibasu@uchicago.edu and/or yangili1@uchicago.edu and include a CV, a brief description of your research interests, and the names of two references.
